The Honorable John Thune
Majority Leader
United States Senate
S-230 The Capitol
Washington, DC 20510

The Honorable Charles Schumer
Minority Leader
United States Senate
S-221 The Capitol
Washington, DC 20510

Dear Majority Leader Thune and Minority Leader Schumer:

Western Governors would like to express their support for provisions in S. 306, the Fire Ready Nation Act of 2025, which was favorably reported by the Committee on Commerce, Science, and Transportation on February 5. Western Governors' collective policy on wildfire management, disaster preparedness, and the state-federal relationship is contained in the attached Western Governors' Association (WGA) policy resolutions:

- 2024-05, Disaster Preparedness and Response;
- 2024-02, National Forest and Rangeland Management; and
- 2024-01, Strengthening the State-Federal Relationship.

Policy Resolution 2024-02 recognizes the need for research and programs to support interagency wildfire communication and response, while Policy Resolution 2024-05 discusses the importance of supporting clear, consistent, accurate and timely communication about the scope and scale of ongoing emergencies. The Fire Weather Services Program proposed in this legislation is designed to make progress toward achieving these goals.

Policy Resolution 2024-01 calls for early, meaningful, substantive and ongoing consultation with states during the development of federal policies that affect states. In this regard, Section 13 of the bill only requires the development of a process for annual coordination with states and other levels of government, to be announced 18 months following the bill's enactment. Instead, there should be a clear and accountable process for government-to-government consultation during the development of the annual coordination process and in its execution. At a minimum, this process should involve soliciting input from states, enabling states to seek program refinements on an ongoing basis, and addressing state concerns. This additional engagement would be immensely useful, as states and local and tribal governments are typically the first responders to wildfire events and would be the primary beneficiaries of the fire weather tools the legislation seeks to develop and deploy.

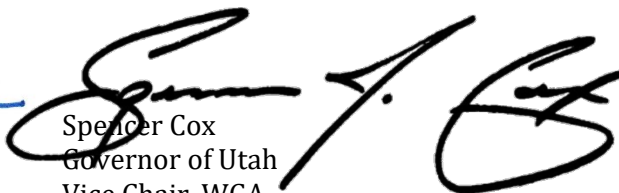

We appreciate your bipartisan efforts to understand wildfire weather and expand our nation's capacity to respond to wildfires. We look forward to working with you as the bill moves through the legislative process and stand ready to serve as a resource.

The Honorable John Thune
The Honorable Charles Schumer
June 5, 2025

Policy Resolution 2024-05

Disaster Preparedness and Response

A. **BACKGROUND**

Major disasters, emergencies and extreme weather events are devastating to the people, property, economy, and natural environment of the communities in which they occur. The outcomes of disasters and emergencies can often be far reaching, and the public costs of disasters and emergencies have increased significantly in recent years. Governors hold the sole authority to request federal assistance when a disaster overwhelms state and local capabilities, and the federal government plays a critical role in pre-disaster risk mitigation, disaster response, and long-term disaster recovery. The first category – proactive risk reduction activities – has a very high return on investment, especially in the context of modern, climate-influenced disasters such as wildfire, extreme heat, or atmospheric rivers. The latter two categories, disaster response and recovery, tend to create a significant financial burden on individuals and communities, and this burden may be disproportionately borne by people who are facing pre-existing financial challenges. Effective disaster response and recovery is essential not only to mitigate current disasters, but also prevent additional ‘cascading disasters’ in the aftermath of the initial event. The COVID-19 pandemic reinforced the need for close coordination between federal, state, territorial, local and tribal governments in emergency management. Interagency coordination can serve to streamline the provision of disaster assistance, which in turn can help to reduce barriers to access and improve post-disaster outcomes.

B. **GOVERNORS' POLICY STATEMENT**

1. Governors need maximum flexibility to respond to disaster and emergency circumstances that may evolve quickly over the course of a disaster through the initiation of recovery. Therefore, Congress and federal agencies should expeditiously remove any barriers limiting a Governor and their executive branch agencies' ability to save taxpayer money and expedite response and recovery efforts while safeguarding lives, property, and the environment. Western Governors recognize that planning processes and disaster and emergency protocols are important aspects of emergency management, but Governors also need significant freedom to adapt those plans to changing circumstances during the evolution of a disaster or emergency.
2. Federal, state, territorial and tribal efforts to prepare for, mitigate against, respond to, and recover from emergencies and disasters must ensure programs and response efforts are inclusive, equitable, accessible, and representative of the affected communities. Development of federal disaster programs, policies, and procedures should be mindful of underserved and underrepresented communities while also addressing all survivors' post-disaster needs.
3. Western Governors encourage Congress and federal agencies to reassess the structure and administrative mechanisms of disaster mitigation grant programs to establish the most effective means of determining the necessity and delivery of federal disaster assistance. This should involve eliminating duplicative processes and establishing consistent standards

for federal grant programs, including the Hazard Mitigation Grant Program (HMGP), the State Homeland Security Program, the Building Resilient Infrastructure and Communities Program, and the Emergency Management Performance Grant Program (EMPG).

4. When managing disaster declarations, state and local governments coordinate billions of dollars in federal grants through the Federal Emergency Management Agency (FEMA). To help offset administrative requirements of these grants, FEMA regulations allow recipients to utilize a percentage for management costs. These management costs, however, are limited to each specific disaster and regulations do not allow grantees to economize by managing workloads across all open disasters. Western Governors urge Congress to direct FEMA to allow grantees to utilize management costs across all open disasters, which will build recovery and mitigation capacity, incentivize disaster close-out, and reduce the costs of disasters.
5. Federal agencies conducting disaster recovery and assistance, as well as the programs which they administer, should receive adequate and consistent funding and allow Western Governors and their designated executive branch agencies to have critical input on where those funds are needed most. The lack of speed, certainty, and consistency in deployment of federal disaster funding is a hinderance to coordinated recovery efforts and effective utilization of public funds.
6. EMPG funds are the primary funding source for local emergency managers, and funding for this program has ostensibly decreased due to inflation. Congress should increase EMPG funding to expand state and territorial capacity to provide technical assistance and expedite reimbursement for FEMA public assistance applicants.
7. Stafford Act declarations generally respond to rapid-onset catastrophes that cause severe damage in a particular area over a defined incident period. Damage from slow-onset, compound, or cascading disasters is difficult to quantify, and assistance for these disasters has historically been limited. Congress should amend the Stafford Act to support disaster response, recovery, and mitigation associated with slow-onset, compound, or cascading disasters. Specifically, Congress should amend the major disaster declaration definition to include slow-onset or other comparable terms, establish a new type of declaration and corresponding disaster assistance authorities for slow-onset and ongoing incidents, and require FEMA to develop a means to assign damage that is not limited to a discrete incident or incident period. Additionally, Congress should require FEMA to modify or extend the incident period under certain conditions.
8. FEMA requires that requests for major disaster declarations be submitted within 30 days of the incident end date. This requirement establishes an arbitrary timeline that does not reflect the reality of cascading disasters. In cases such as wildfire, drought, winter storms, or atmospheric rivers, damage can continue to accumulate and compound well after the 30-day window has passed, preventing accurate damage assessments and timely requests for a disaster declaration. FEMA should extend the application period for a disaster declaration to 60 days and permit extensions up to 90 days, if warranted. FEMA should provide a determination on the declaration request within 60 days from the request's submission. Doing so would accelerate the deployment of all federal disaster assistance while minimizing uncertainty for states, territories, and disaster survivors.

9. FEMA should provide additional resources to support its regional offices' capacity and coordination with states and territories. Each regional office must develop an understanding of local resource concerns and other local factors to help ensure timely, high quality damage assessments and closeout packages that properly compensate communities for some of their most significant losses.
10. Many rural western communities have less concentrated populations than eastern states, making it difficult for western states and territories to qualify for Individual Assistance, Public Assistance, and Fire Management Assistance Grant (FMAG) declarations. Additionally, certain criteria, such as considering Total Taxable Revenue of the entire state when evaluating whether to provide a major declaration for a localized event, makes it virtually impossible for large states to receive a declaration. Federal processes used to evaluate the need for access to disaster aid programs should be reconsidered. Federal agencies should reexamine the standards used to determine the provision of Individual Assistance to homeowners and the access to federal aid needed for recovery from disasters and emergencies that affect western states and territories. The historically underfunded U.S. Department of Agriculture Natural Resources Conservation Service's Emergency Watershed Protection Program should be revisited and strengthened.
11. Western Governors recognize that as the first responders to a disaster or emergency, states, territories, local governments, and tribes have better information about local conditions and needs in the response and immediate recovery phases of a disaster or emergency. FEMA and other applicable federal agencies should work directly with individual states and territories through Governors or their designees to jointly identify disaster risks and methods by which such risks may be addressed.
12. Federal agencies should provide state, territorial, local, and tribal government officials with accessible and clear information on available federal resources and programs and the most effective utilization of those resources in disaster recovery. WGA has worked with federal partners to improve interagency coordination on post-wildfire restoration work, including a roadmap of assistance available to communities affected by wildfire and identification of "navigators" to help communities prioritize post-wildfire restoration needs. Western Governors urge the federal government to prioritize the funding of community navigator efforts for All-Hazards events and other post-disaster restoration needs.
13. Following a Stafford Act major disaster declaration, FEMA assigns a Federal Coordinating Officer (FCO) who is representing the federal interagency resources available following a disaster. Once the Joint Field Office closes and the disaster management operations transition to the regional level, the Regional Administrator is responsible for all remaining activities. It is crucial that the FCO and the FEMA Regional Administrator have a strong relationship and coordinate closely to ensure effective disaster management operations. Another critical role for FEMA disaster personnel is the Public Assistance Program Delivery Manager (PDMG), who is the primary FEMA point of contact for applicants on their disaster projects. PDMGs are currently deployed from all areas of the state and may have vastly different knowledge on various types of disaster damage. Requiring PDMGs to be deployed regionally would improve consistency and subject matter knowledge, which would benefit applicants and FEMA alike.

14. Some western and midwestern states are at risk of catastrophic earthquakes, and mitigation assistance beyond that currently administered by FEMA is needed. Mitigation funds tied to FMAG declarations assist fire-ravaged communities, and the FMAG and Hazard Mitigation Post Fire Grant programs should be continued.
15. Western Governors recognize that community resilience is key to ameliorating the effect of many disasters and emergencies, and that damages could be avoided or minimized if resources were directed to pre-disaster mitigation efforts. Hazard mitigation and risk reduction are the most cost-effective ways to protect lives, property, infrastructure, and the environment from the effects of natural and human-caused hazards. Federal legislation should reconsider the important role of pre-disaster mitigation that reduces the risk and minimizes the effects of disasters and emergencies. When possible, pre-disaster mitigation should be incentivized at the state and local levels. Mobilizing and pre-staging disaster response resources is one strategy for mitigating the potential damages from an anticipated disaster, and FEMA should allow these activities to be eligible under HMGP. If the key to minimizing the effect of disasters and emergencies is pre-disaster mitigation, then steps need to be taken to reduce or minimize the cost share that is associated with many, if not all of these grants. Finally, infrastructure planning should include consideration of risk reduction measures for known hazards and address the dynamic hazard profile created by a changing climate.
16. Western Governors encourage the Administration to consider actions to increase communication and cohesion of federal agencies in disaster and emergency response. The Administration should consider placing a federal agency in the lead role to coordinate communication between and cohesion of federal agencies in disaster and emergency response. Strengthening federal emergency management processes to promote single, comprehensive points of contact and universal intake processes for individuals would streamline state-federal coordination and help ensure that individuals are not burdened by federal program administrative processes. Federal agencies are encouraged to enter into data-sharing agreements. Western Governors support the adoption of a universal intake application for disaster assistance across federal programs. Western Governors also support the consideration of a national emergency management strategy to provide consistent lines of communication between federal, state, territorial, local, and tribal governments.
17. Western Governors recognize the need for clear, consistent, accurate and timely communication about the scope and scale of disasters and emergencies, both between all levels of governments and between governments and their constituents. Clearly articulating what is known and what is not known about a disaster or emergency is critical to developing and executing an effective response from governments, promoting public confidence in those response actions, and empowering citizens to make informed decisions about their safety and welfare.
18. Extreme weather and wildfires pose significant risks and challenges to communities, public health and safety, and livelihoods. Additionally, they create potential liability for electric companies, regardless of the cause of the wildfire. The threat of significant liability can destabilize the financial health of electric companies, threatening their ability to continue operations. However, demands for additional clean electricity continue to rise. Keeping electric companies viable is essential to our energy needs and future economic development within our states. Western Governors recognize, that unlike other natural disasters,

wildfires create pose an exceptional liability risk for electric companies, placing them in a position that jeopardizes their ability to provide essential power services amid hotter and longer fire seasons. Western Governors urge Congress to collaborate with regulators, policymakers, and stakeholders to explore collaborative approaches to address the potential for large liabilities associated with wildfires. These approaches should consider that utility companies are not structured to meet the required risk diversification, solvency, or other conditions traditionally associated with insurance products.

19. Federal agencies should consider reducing or eliminating cost share requirements in instances where those requirements expose states to burdensome financial liabilities. For example, Other Needs Assistance, a subset of Individual Assistance provided by FEMA, has a 25 percent state cost share. Adding or expanding benefits under the umbrella of Other Needs Assistance increases state costs with no mechanism to relieve these costs for large-scale disasters.

C. GOVERNORS' MANAGEMENT DIRECTIVE

1. The Governors direct WGA staff to work with Congressional committees of jurisdiction, the Executive Branch, and other entities, where appropriate, to achieve the objectives of this resolution.
2. Furthermore, the Governors direct WGA staff to consult with the Staff Advisory Council regarding its efforts to realize the objectives of this resolution and to keep the Governors apprised of its progress in this regard.

This resolution will expire in June 2027. Western Governors enact new policy resolutions and amend existing resolutions on a semiannual basis. Please consult <http://www.westgov.org/resolutions> for the most current copy of a resolution and a list of all current WGA policy resolutions.

Policy Resolution 2024-02

National Forest and Rangeland Management

A. **BACKGROUND**

Western states contain over 75 percent of the national forest and grassland system, and communities in the West depend upon forests and rangelands for jobs, recreation, and quality of life. Conversely, effective natural resource management is only possible if rural and resource-dependent communities are healthy, vibrant, and prosperous. These forests and rangelands provide a number of important ecosystem services that drive local economic activities including grazing, forest products, and recreation. The majority of surface water in the West originates in National Forests as well, and western water security is directly tied to the health of western forests. Both natural disturbances and management decisions have the potential to fundamentally alter the complex, interdependent relationship between communities and land. Climate change can accelerate these dynamics by increasing the frequency and severity of fire, altering hydrologic patterns, and expanding the potential range of invasive species. Furthermore, states have a unique interest in active land management and improving lands' resilience against disturbances because state governments have trust authority over water, wildlife, and forest resources, along with primary authority and expertise to protect community health and safety.

B. **GOVERNORS' POLICY STATEMENT**

1. Western Governors support sound forest and rangeland management policies that maintain and promote ecologic, economic, and social balance and sustainability.
2. Western Governors support the creation of mechanisms to identify and enhance cross-boundary collaborative work.
3. Western Governors point to the Western Governors' Association (WGA) – U.S. Department of Agriculture (USDA) Shared Stewardship Memorandum of Understanding (MOU) as an example of an effective framework to establish shared state-federal priorities for forest and rangeland management and encourage the development of similar MOUs with other Executive Branch agencies for other areas of natural resource management.
4. Effective forest and rangeland management is only possible through coordination between federal, state, local, and tribal land management agencies. These agencies should strive to find new ways to collaborate on forest and rangeland management projects, as well as to explore ways to improve state-federal coordination on existing management projects. Shared Stewardship Agreements between states and USDA are a good example. Federal agencies should look to local communities as a source of strength, knowledge, and support during the planning and implementation of forest and rangeland management projects and should be encouraged to work with local communities while planning forest and rangeland management projects. The U.S. Forest Service (USFS) and Bureau of Land Management (BLM) could achieve this by developing regional and cross-boundary collaboratives to facilitate cooperation on

ecosystem-level land management challenges and water source protection. Federal land management agencies should consider investing in facilitation capacity and training for agency personnel and partner organizations involved with collaboratives.

5. Western Governors support improvements to interagency communication, fire response capability, and coordination, including the sharing of firefighting resources. Fire management activities should support fire prevention, rapid response capabilities, full suppression strategies where appropriate and management of wildfire for resource benefits. Local government and volunteer fire associations play a critical role in wildfire response and mitigation, and state and federal agencies should look for ways to further incorporate these groups into regional wildfire dispatch and coordination centers. Additionally, it is critical that improvements are made to simplify the fire billing adjudication process to ensure more timely reimbursements in line with agreement standards.
6. Federal agencies should examine funding match requirements and consider reducing or eliminating these requirements when the public benefit outweighs the cost of the funding match. Federal agencies are encouraged to work with western states to ensure that communities' access to these grants is as efficient and streamlined as possible.
7. Federal agencies should facilitate the participation of state, local, and tribal governments in federal decision making by dedicating staff to develop and provide technical assistance and enhance communications across local, tribal, state, and federal partners. Federal agencies should also take steps to assist resource-constrained communities in developing needed capacities such as grant writing or conducting environmental analyses.
8. States may be the conveners of collaborative interagency forest and rangeland management efforts, such as in the case of Good Neighbor Agreements. When this occurs, federal agencies should provide funding and support to states for the cost incurred during any convening role. Congress and federal agencies should also provide opportunities for expanded cooperation, particularly where states are working to help their federal partners to improve management of federal lands through the contribution of state expertise and resources.
9. Effective forest and rangeland management requires a network of forest and rangeland infrastructure to manage, maintain, and restore western forests and rangelands. Federal and state agencies should strive to find ways to support and expand critical forest and rangeland management infrastructure, including mills, biomass facilities, livestock watering systems, and roads. Federal agencies should also examine the need for market incentives to encourage sustainable nursery markets and facilitate the development of additional nursery capacity. The federal government should take steps to address equipment shortages as part of its implementation of the Infrastructure Investment and Jobs Act (IIJA).
10. Federal and state agencies should look for ways to grow the workforce needed to support and operate forest and rangeland management infrastructure. These agencies should explore the expanded use of youth, veterans, inmate crews, and conservation corps to provide cost-effective capacity to support forest and rangeland restoration. The federal government and employers should also consider work experience and other non-traditional credentials in hiring to ensure adequate capacity for land management project implementation. The federal government, states, and territories should examine standards on hiring persons with criminal backgrounds to promote employment opportunities for qualified applicants that present

minimal risk for future criminal behavior. The federal government should focus attention on housing needs and assist communities seeking to attract and retain workforce.

11. Western Governors support the expansion of restoration projects in forest and rangelands, including repair or removal of culverts and other barriers to fish passage. Federal and state agencies should strive to find ways to support and expand cost-effective means of supplying restoration projects, such as with large woody material from adjacent overstocked forests, which in turn supports the rural workforce needed to implement large-scale watershed and stream restoration efforts.
12. A thriving forest products industry is essential to support critical forest management infrastructure. Western Governors support the expansion of markets for forest products. Federal agencies should expand opportunities and incentives for existing USDA, Economic Development Administration, and Small Business Administration programs and financing to support forest products business development and infrastructure. USFS Research and Development, State and Private Forestry, and National Forest System should work collaboratively to support existing and emerging forest products technologies, including the work of the National Forest Products Laboratory, with the goal of expanding markets to maximize restoration activity.
13. Congress should pass legislation to promote forest and rangeland product markets and technologies and expand funding for the Community Wood Energy Program. Federal agencies are encouraged to continue research and development efforts to find viable markets for low-value biomass and prioritize the utilization of low-value biomass for thermal, electric, and liquid-fuel energy. Rural electric cooperatives, public utilities, community facility managers, and other partners should contribute to the research, testing and deployment of new and modified heat and electric generation projects and liquid-fuel facilities from hazardous fuels reduction, conifer removal, and other forest and rangeland restoration efforts.
14. Federal land managers should work to ensure that forest products producers have increased certainty of supply, as well as a broader suite of outlets, in addition to traditional sawmills and existing biomass facilities. States can also work with USFS and other federal land managers to establish more long-term stewardship agreements to ensure a long-term feedstock supply. Federal resources and partnerships should support efforts beyond federal lands given the critical role of cross-boundary work.
15. Authorities granted in past Farm Bills such as Good Neighbor Authority (GNA) and Stewardship Contracting Authority (SCA) are powerful tools to boost forest and rangeland management, promote collaboration, and limit the effects of administrative objections and litigation. Congress should extend both authorities to all federal land management agencies and authorize those entities to increase the flexibility of GNA and SCA. Federal agencies should modify GNA guidance for all eligible partners to allow 20-year contracts, retention of timber sale revenue, a broader set of authorized restoration services, and the expenditure of project revenue on non-federal lands.
16. Western Governors believe clear, coordinated, and consistent application of federal vegetation management practices is integral to maintaining the health of western forests, preventing dangerous and damaging wildfires, and maintaining grid reliability. The Governors support effective and efficient cross-jurisdictional coordination that enables utilities to undertake necessary vegetation management actions on federal transmission rights-of-way.

17. Congress should direct funding to the Joint Chiefs Landscape Restoration Program to facilitate continued partnership and investment between USFS, the Natural Resources Conservation Service, and state foresters to support restoration projects.
18. The USFS business model can be improved by identifying business practice barriers to cross-boundary projects, developing training on state and federal contracting procedures, utilizing Service First authorities, streamlining and consolidating agency processes with partners, and establishing multi-agency pilot projects, which can suggest models for subsequent formal agreement.
19. Western Governors encourage effective deployment of IJJA programs, including programs that provide incentives to purchase equipment, participate in new processes, or expand markets to encourage deploying new conservation practices to aid in forest and soil health and restoration.
20. Western Governors support efforts to improve the effectiveness of the National Environmental Policy Act (NEPA) in a forest and rangeland management context, including the use of area-wide plans and specialized teams to bolster NEPA capacity. Federal agencies should engage with Governors and states in early, meaningful, and substantive consultation throughout the NEPA process. Western Governors support allowing federal agencies to analyze only the action and no-action alternatives when a project is collaboratively developed, unless a third alternative is proposed during scoping and meets the purpose and need of the project. Federal agencies should consider how interagency shared positions can create regulatory efficiencies and promote greater collaboration between federal, state, territorial, local, and tribal land managers.
21. State, tribal, and federal agencies should look to expand the training for and use of prescribed fire and should look for ways to reduce the statutory, regulatory, and economic barriers to its expanded use on western forests and rangelands.
22. Federal agencies seeking to deploy prescribed fire should work to educate the public about the utility and necessity of prescribed burns to increase cultural acceptance of the practice. Federal agencies should also coordinate with state air quality specialists on prescribed burns, put greater effort into coordinating prescribed fire with mechanical treatments; updating models, tools, and practices for safe burning; and putting a greater emphasis on post-burn preparation. State and federal air quality specialists should work together to identify reforms that reduce barriers to prescribed fire, reduce overall health impacts from smoke, improve interagency use of smoke management best practices, and examine liability protection for fire managers and compensation for private property owners negatively affected by escaped prescribed burns.
23. Land managers across the West should strive to increase workforce capacity for science-based vegetation management activities, oversight, and planning.
24. Traditional Native American cultural burning and tribal ecological knowledge and practices can contribute significantly to improved forest management in the West and should be incorporated more effectively into federal and state planning management processes.

25. Western Governors support efforts to improve a broad range of pre-fire mitigation practices. State and federal agencies should work to develop tools to support mechanical hazardous fuels reduction, especially the removal of underbrush and understory, which are economically unviable in many instances. Land managers should work to further integrate invasive species data and management practices into hazard fuels management and planning.
26. The federal government should consider additional steps to recruit and retain an effective land management and wildland firefighting workforce, including dispatchers. Federal agencies should examine their reliance on 1039 seasonal staff, shift a higher percentage of wildland fire staff from seasonal to permanent and permanent subject to furlough positions, evaluate policies related to the use of Administratively Determined emergency firefighters, and authorize hazard pay for federal firefighters performing prescribed fire operations.
27. Agencies and stakeholders should continue to seek opportunities, including revisions to forest plans, to enhance safety and reduce costs in suppression decisions while protecting communities. Incentives should be created for local governments to take voluntary actions to support the creation and expansion of fire-adapted and smoke-ready communities, including the promotion of education, fuels management projects, and improved integration of community wildfire protection plans with land use decisions when compatible with local goals. Federal land managers are encouraged to make shared wildfire risk mitigation systems (SWRM) and similar tools widely available to communities and decisionmakers.
28. Western Governors support increased attention to the challenges posed in post-wildfire landscapes and wildfire-affected communities. Federal agencies should collaborate with states to designate and train post-fire coordinators to manage post-fire recovery. Doing so would encourage better awareness of post-wildfire restoration funding opportunities available to wildfire-affected communities and more sophisticated coordination of restoration activities to achieve restoration objectives. Land managers should prioritize post-wildfire water quality effects in mitigation planning and execution.
29. Increasing the pace and scale of restoration work like prescribed fire, fuels reduction, active management, and reforestation can help reduce the effects of climate change. Western Governors support the creation and expansion of technical and financial assistance to landowners for carbon sequestration and conservation activities on forests and rangelands. Land managers should integrate small private landowners into ecosystem planning processes and responsible land management practices; additional methods of gaining small landowner participation and engagement should also be explored.
30. Federal agencies need to ensure adequate monitoring, assessment, and analysis of federal forests and rangelands, including data on wildlife, water, soil, and forage. States, territories, and federal agencies are encouraged to consider standardizing and simplifying data collection protocols for federal agencies, states, counties, and tribes which include robust landowner privacy standards and protections. Federal agencies should strive to further improve the collection of socioeconomic data related to forest and rangeland management decisions, and to further incorporate that data into management decisions.
31. The Administration should provide federal funding to develop detailed state rangeland action plans addressing invasive species, wildlife and fish habitat, and water quality and quantity as a complement to State Forest Plans. These rangeland plans should include resource analyses of

soil health, water, plants, animals, and productive capacities to inform management decision-making.

32. Western Governors urge Congress and the Administration to support the research needed for responsible and effective forest and rangeland management in the West. Federal agencies conducting research should also work to ensure that public research projects are focused on research that supports on the ground management needs. Western Governors urge Congress and the Administration to support USFS Research Stations, which play a key role in forest and rangeland management in the West.
33. Federal agencies are encouraged to include cost metrics such as the avoided cost of uncharacteristic wildfire, smoke effects on populations, excessive carbon emissions, and damage to water supply systems and downstream communities when assessing the merits of mitigation projects.
34. The outbreak of the COVID virus in 2020 posed a significant challenge to those working to manage the West's forests and rangelands, particularly wildland firefighters. State, federal, and local wildland fire managers should be encouraged to learn from the pandemic response and, as appropriate, implement effective new management principles developed during that pandemic into permanent practice. Efforts should be made to ensure that emergency response personnel are prepared for similar situations in the future, as well as other potential risks.
35. Mature and old growth forest characteristics should be considered when actively managing forest ecosystems but should not impede the ability to actively manage and restore forest ecosystems. Ecosystem resiliency is, in part, dependent on having a range of various tree age classifications within a forested ecosystem. Mapping tools should be used generically to identify where mature and old growth forests may be present and management actions should be based on locally verified ecosystem resiliency factors and ground truthing.
36. Western Governors support the continued responsible use of federal lands for grazing and increased funding for grazing management, monitoring, and permit condition compliance. Repairing and replacing range improvements, particularly fencing, in a timely manner should be a priority for federal land management agencies in wildfire-affected areas.
37. We support sound, science-based management decisions for federal lands – including adaptive management – and believe these decisions should be based upon flexible policies that take into account local ecological conditions and state planning decisions for fish and wildlife and other human needs.
38. Federal and state land managers should identify opportunities to improve flexibility and integration of grazing management and targeted grazing as tools to achieve restoration and land management goals, including fish and wildlife habitat improvements, drought and wildfire mitigation and resilience, water quality and watershed health, soil health management, promotion of perennial plant health, and control of invasive species such as cheatgrass. They should also promote grazing allotment flexibility on federal lands, within USFS and BLM permitting systems and across ownership boundaries, to respond to changing rangeland conditions and environmental considerations. Western Governors also encourage measures of successful grazing be based in ecological outcomes showing upward trends.

39. Livestock grazing on federal lands is compatible with recreation and wildlife management and fulfills the multiple use and sustained yield mission of both the USFS and BLM. Policies, analyses, or planning decisions that lead to closing allotments must be based on science, documented threats, and causal factors consistent with state policies and programs as well as federal multiple use missions. It should also be taken into consideration that grazing suspensions and closures after wildfire allow for the onset of invasive grasses causing a quicker fire return interval, which can exacerbate the threat of wildfire.
40. Decisions to reduce or suspend grazing should only be made when supported by an appropriate quantitative assessment of long- and short-term trends in rangeland conditions on specific allotments, risk of spread of invasive weeds, diseases to wildlife, or other documented fish or wildlife impacts. Forage use from wild ungulates should be assessed using rigorous quantitative methods when identifying the causal factors that affect range conditions, and those wild ungulates should be managed for their proportional impact. If after consultation with the state, the federal agency decides to reduce, suspend, close, or modify an allotment due to documented harmful wildlife impacts, an alternative allotment, properly authorized pursuant to NEPA, if a suitable alternative allotment exists, must be made available to the displaced operator prior to adjustment of the original allotment. In order to fully implement this policy, the BLM and USFS must have alternative allotments properly authorized under relevant planning documents. This ensures that suspensions or modification of grazing permits will not result in a net loss of Animal Unit Months and that appropriate alternative allotments are available.
41. Grazing permit renewal decisions should be assisted by current site-specific, quantitative data. Federal agencies should engage in meaningful consultation, coordination, and cooperation with livestock grazing permittees, state and local governments, tribes, and stakeholders, prior to initiation and throughout the entire permit renewal process.
42. Federal land management agencies' decisions to reduce or close allotments should only be based upon completion of a full administrative review and analysis, including a thorough review under the provisions of NEPA. The decision process must include opportunities for states, livestock grazing permittees, and other stakeholders to provide input. Allotments should not be closed due to a pending NEPA review without allowing authorized use of the allotment pending a final decision, or the use of an equivalent amount of forage at reasonably equivalent cost to compliant operators.
43. Federal rangeland specialists should have an understanding of the economics and management of ranching operations dependent upon federal lands and should receive the necessary training to comprehensively monitor rangelands, conduct objective analysis, and write sound environmental documents.
44. Clear directives and accountability throughout all levels of the USFS and BLM should be required so that interpretation and implementation is practical and predictable from office to office and individual to individual and informed by an understanding of localized rangeland and ecological conditions, and economic health of ranch operations. BLM should engage collaboratively with livestock grazing permittees when developing Annual Operating Instructions and aim to minimize economic burdens to permittees.
45. Federal land management agencies must give interested state agencies an opportunity to fully participate in or provide input to grazing permit actions – prior to their initiation – including

generalized review of livestock operations on federal lands, any assessment of grazing conditions as part of a federal planning process, review of past compliance of the operator with grazing allotment conditions, and individual allotment reviews. Grazing permit decisions should not be finalized until after this opportunity for meaningful consultation with the states, local governments, and the affected permittees.

46. Governors possess primary decision-making authority for management of state resources. States also have knowledge and experience that are necessary for the development of effective plans. Accordingly, it is essential that Governors have a substantive role in federal agencies' planning processes and an opportunity to review new, revised, or amended federal land management plans for consistency with existing state plans. Federal agencies should provide Governors with sufficient time for a complete state review of federal land management plans, especially when federal plans affect multiple planning areas or resources.
47. The federal government should be a responsible landowner and neighbor and should work diligently to improve the health of federal lands in the West. Federal actions or failures to act on federal lands affect adjacent state and privately-owned lands, as well as state-managed natural resources.
48. Congress and federal agencies should provide opportunities for expanded cooperation, particularly where states are working to help their federal partners to improve management of federal lands through the contribution of state expertise and resources.
49. Western Governors support efforts to examine rural communities' relationships with natural resources, such as forests, rangelands, croplands, wildlife, and source water, as well as the important role that rural communities play in the management of these resources. Policymakers in the West should be encouraged to identify barriers to growth and sustainability in western communities, including a lack of restoration infrastructure, disaster mitigation challenges, dependence upon a single natural resource, and issues related to local capacity, expertise, and funding, and identify best practices to help rural communities overcome these barriers.

C. GOVERNORS' MANAGEMENT DIRECTIVE

1. The Governors direct WGA staff to work with congressional committees of jurisdiction, the Executive Branch, and other entities, where appropriate, to achieve the objectives of this resolution.
2. Furthermore, the Governors direct WGA staff to consult with the Staff Advisory Council regarding its efforts to realize the objectives of this resolution and to keep the Governors apprised of its progress in this regard.

This resolution will expire in December 2026. Western Governors enact new policy resolutions and amend existing resolutions on a semiannual basis. Please consult <http://www.westgov.org/resolutions> for the most current copy of a resolution and a list of all current WGA policy resolutions.

Policy Resolution 2024-01

Strengthening the State-Federal Relationship

A. **BACKGROUND**

1. Western Governors are proud of their unique role in governing and serving the citizens of this great nation. As the chief elected officials of sovereign states, they bear enormous responsibility and have tremendous opportunity. Moreover, the faithful discharge of their obligations is central to the success of the Great American Experiment.
2. It was the states that confederated to form a more perfect union by creating a national government with specific responsibilities for common interests. In this union, the states retained their sovereignty and much of their authority.¹
3. Under the American version of federalism, the powers of the federal government are narrow, enumerated and defined. The powers of the states, on the other hand, are vast and indefinite and encompass all powers of governance not specifically bestowed to the federal government by the U.S. Constitution. This principle is memorialized in the Tenth Amendment, which states: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."
4. This reservation of power to the states respects the differences between regions and peoples, recognizes a right to self-determination at a local level, and provides for flexible, tailored solutions to policy challenges. It also requires the federal government to engage with states – our nation's dynamic laboratories of democracy – on a government-to-government basis befitting their co-sovereign status.
5. In addition to states' reserved sovereign authorities, Congress has recognized state authority in federal statute by: (1) directing the federal government to defer to state authority, including such authority over land and water use, education, domestic relations, criminal law, property law, local government, taxation, and fish and wildlife; and (2) delegating federal authority to states, including the regulation of water quality, air quality, and solid and hazardous waste.
6. [Executive Order 13132](#), Federalism, reinforces these constitutional, statutory, and judicial principles and directs federal agencies to have an accountable process to ensure meaningful and timely input from state officials in developing policies with federalism implications.
7. The relationship between state and federal authority is complex and multi-dimensional. There are various contexts in which these authorities manifest and intersect:

¹ The U.S. Supreme Court has confirmed that, "[d]ual sovereignty is a defining feature of our Nation's constitutional blueprint" and "States entered the Union with their sovereignty intact." *See, e.g., Sossamon v. Texas*, 563 U.S. 277, 283 (2011).

- a) **State Primacy** – All powers not specifically delegated to the federal government in the Constitution. In the absence of Constitutional delegation of authority to the federal government, state authority should be presumed sovereign. *Examples: groundwater, wildlife management (outside of the Endangered Species Act), natural resources management, electric transmission siting.*
 - b) **Shared State-Federal Authority** – Fact patterns in which federal authority and state primacy intersect. *Examples: wild horses and burros on federal lands, interstate water compacts.*
 - c) **Federal Authority Delegated to States** – Federal authority that Congress has delegated to states by statute. Many such statutes require federal agencies to set federal standards (and ensure those standards are met) but authorize states to implement those standards. *Examples: water and air quality, solid and hazardous waste.*
 - d) **Federal Statutory or Other Obligations to States** – Where the federal government has a statutory, historical, or moral obligation to states. *Examples: Payments in Lieu of Taxes; Secure Rural Schools Act; shared mineral royalties; agreements to clean up radioactive waste that was generated by federal nuclear weapons production.*
 - e) **Exclusive Federal Authority** – Powers enumerated in the Constitution as exclusive powers of the federal government. In areas of exclusive federal authority, state law can be preempted if Congress clearly and unambiguously articulates an intent to occupy a given field or to the extent it conflicts with state law. *Examples: national defense, production of money.*
8. In contravention of the Founders’ design, the balance of power has shifted toward the federal government and away from the states. Increasingly prescriptive regulations tie the hands of states and local governments, dampen innovation, and impair on-the-ground problem-solving. Failures of the federal government to consult with states reflect insufficient appreciation for local knowledge, preferences, and competencies. In many cases, these federal actions encroach on state legal prerogatives, neglect state expertise, and/or infringe on state authority.
 9. The federal government often requires states to execute policy initiatives without providing the funding necessary for their implementation. State governments cannot function as full partners if the federal government requires them to devote their limited resources to compliance with unfunded federal mandates.
 10. State authority and autonomy is also eroded when prescribed federal policies become effectively mandatory through the contingency of federal funding streams that states depend on to deliver critical services.
 11. Too often, federal agencies: solicit input from states after a decision is already made or a public process is started; ask states to provide feedback on a proposed action without providing details or documents regarding what the agency is proposing; or do not respond to state input or incorporate feedback from states into their decisions. This does not afford states with the respect and communication required by law, and states currently have no

recourse for an agency's failure to consult except for litigation on the merits of a federal decision.

12. Congress and Executive Order 13132 currently require federal agencies to document the effects of their actions on states in certain circumstances. In practice, federal agencies rarely prepare these prescribed federalism assessments or statements. Even when federal agencies prepare such documents, they are not ordinarily informed by input from affected states. In addition, these documentation requirements only apply at the end of the rulemaking process and cannot substitute for early and meaningful consultation with states.
13. Federal agencies have suggested to states that there are legal or other barriers to state consultation, such as: federal agency policies restricting *ex parte* communications; concerns about the applicability of Federal Advisory Committee Act (FACA) procedures to meetings between state and federal officials; and issues with sharing information that would otherwise be exempt from disclosure under the Freedom of Information Act (FOIA).
14. Federal agencies do not adequately incorporate state data and expertise into their decisions. This can result in duplication, inefficiency, and federal decisions that do not reflect on-the-ground conditions. Consideration and incorporation of state, tribal, and local data and analysis will result in federal actions that are better-informed, more effectively coordinated among all levels of government, and tailored to the communities they affect.
15. Many of these issues stem from a profound misunderstanding throughout the federal government regarding the role and legal status of states. Over the past several years, Western Governors have worked to improve the federal government's understanding of state sovereignty, authority, and state-federal consultation; meaningful structural change, however, has yet to occur.

B. GOVERNORS' POLICY STATEMENT

1. A good faith partnership between states and the federal government will result in more efficient, economic, effective, and durable policy, benefiting the Governors' and the federal government's shared constituents and resulting in a nation that is stronger, more resilient, and more united.
2. Improving state-federal communication and coordination is a goal that transcends party lines, and it is among the Governors' highest priorities. The Governors urge Congress and the Executive Branch to make fundamental changes to realign and improve the state-federal paradigm.

State Sovereignty and Authority

3. States are co-sovereigns with the federal government pursuant to the Tenth Amendment of the U.S. Constitution and other federal law. Congress and federal agencies must recognize state sovereignty and must not conflate states with other entities or units of government. States should not be treated as stakeholders or members of the public.
4. State authority is presumed sovereign in the absence of Constitutional delegation of authority to the federal government.

- a) Federal legislative and regulatory actions should be limited to issues of national significance or scope, pursuant to federal constitutional authority. Preemption of state laws should be limited to instances of necessity.
 - b) Where Congress preempts state law (acting pursuant to federal constitutional authority), federal law should accommodate state laws, regulations, and policies before its enactment and permit states that have developed alternate standards to continue to enforce and adhere to them.
 - c) Federal agencies should construe federal law to preempt state law only when a statute contains an express preemption provision or there is some other compelling evidence that Congress intended to preempt state law.
5. Congress and federal agencies should respect the authority of states to determine the allocation of state administrative and financial responsibilities in accordance with state constitutions and statutes. It should further:
- a) Ensure that federal government monitoring is outcome-oriented;
 - b) Minimize federal reporting requirements; and
 - c) Refrain from dictating state or local government organization.
6. When a state is meeting the requirements of a delegated program, the role of a federal agency should be limited to the provision of funding, technical assistance and research support. States should have the maximum discretion to develop implementation and enforcement approaches within their jurisdiction without federal intervention. Federal agencies should recognize and credit states' proactive actions.
7. Congress and federal agencies should avoid imposing unfunded federal mandates on states. In addition:
- a) Federal assistance funds, including funds that will be passed through to local governments, should flow through states according to state laws and procedures;
 - b) States should have the flexibility to transfer a limited amount of funds from one grant program to another and to coordinate the administration of related grants;
 - c) Federal funds should provide maximum state flexibility without specific set-asides; and
 - d) Governors should have the authority to require coordination among state executive branch agencies, or between levels or units of government, as a condition of the allocation or pass-through of funds.
8. Congress and the Executive Branch should create or re-establish entities to discuss and act on federalism issues, in consultation with states. These entities should have the ability and resources to make recommendations to improve the state-federal relationship and include states in their membership or actively involve states in their discussions.

State-Federal Consultation

9. Federal agencies must engage in consultation with states on a government-to-government basis in accordance with states' legal status. Congress should clarify and promote the need for state-federal consultation.
10. Improving state-federal consultation will result in more effective, efficient, and long-lasting federal policy for the following reasons:
 - a) Governors have specialized knowledge of their states' environments, resources, laws, cultures, and economies that is essential to informed federal decision making;
 - b) Federal agencies can reduce duplication through the use and incorporation of state expertise, data, and documentation;
 - c) Authentic communication and information exchange will help federal agencies determine whether an issue is best addressed at the federal level; and
 - d) Through meaningful dialogues with affected states, federal agencies can also avoid unintended consequences and address or resolve state concerns.
11. Each Executive department and agency should have a clear and accountable process to provide each state – through its Governor or their designees – with early, meaningful, substantive, and ongoing consultation in the development of federal policies that affect states. The extent of the consultation process should be determined by engaging with affected states. At a minimum, this process must involve:
 - a) Conducting consultation through federal representatives who can speak or act on behalf of an agency;
 - b) Inviting states to provide input outside of a public process and before proposals are finalized;
 - c) Enabling states to engage with federal agencies on an ongoing basis to seek refinements to proposed federal actions prior to finalization;
 - d) Providing robust information and documents (including non-final, non-public, draft, and supporting documents) about potential federal actions, including proposed rules, to Governors or their designees;
 - e) Addressing or resolving, where possible, state issues, concerns, or other input unless precluded by law;
 - f) Documenting how state concerns were resolved or why they were unable to be resolved in final decisions; and
 - g) Making reasonable efforts to achieve consistency and avoid conflicts between federal and state objectives, plans, policies, and programs.

12. Governors affirm their reciprocal role in advancing a clear, predictable, timely, and accountable consultation process. Governors or their designees must continue to provide clear expectations for the appropriate scope and scale of consultation and must work with federal agencies to make consultation processes as efficient as practicable. As chief executives, Governors must also ensure the views of the state are clearly and consistently conveyed throughout the consultation process by prioritizing significant issues and resolving competing viewpoints across state government.
13. In many cases, federal agencies are required – whether by statute, executive order, regulation, policy, or other mandate – to consult, cooperate, and coordinate with states before taking action. However, due to states’ unique legal status, the need for federal-state engagement is not limited to express directives and should extend to any federal actions that may have direct effects on states, on the relationship between the federal government and states, or on the distribution of power or responsibilities among the various levels of government. Federal agencies should consult with states regarding what types of agency actions typically affect states and the extent of consultation required for these types of actions.
 - a) These actions include the implementation of federal statutes and the development, prioritization, and implementation of agency policies, rules, programs, reviews (e.g., Governor’s Consistency Reviews), plans (e.g., resource management plans), budget proposals and processes, strategic planning efforts (e.g., reorganization), and federal litigation or adjudication that affects states.
 - b) When a federal agency proposes to enter into any agreement or settlement that affects states, the agency should provide all affected Governors or their designees with notice of the proposal and consult with, and seek the concurrence of, Governors or their designees who respond to the notice.
14. Congress and the Executive Branch should require federal agencies to promulgate regulations in consultation with Governors, setting forth their procedures to ensure meaningful, substantive consultation with states on federal actions that affect states. This direction should also clarify that, for rulemakings affecting states:
 - a) An agency’s satisfaction of rulemaking requirements under the Administrative Procedure Act (including the solicitation of public comments) does not satisfy an agency’s obligation to consult with states; and
 - b) Consultation should occur before publication of a notice of proposed rulemaking or before an advanced notice of proposed rulemaking is submitted to the Office of Management and Budget (OMB).
15. Congress and the Executive Branch should consider the following additional accountability measures:
 - a) Requiring the designation of a federalism official with the responsibility for implementing state-federal consultation and publish this official’s name, title, and contact information on the agency’s website;

- b) Requiring OMB to regularly submit a report to Congress and Governors on state-federal consultation and implementation of agency consultation rules;
 - c) Requiring federal agencies to provide a summary of their efforts to consult with states, including a discussion of state input and how that input was considered or addressed, in any proposed and final rules;
 - d) Creating a process where Governors can notify OMB of an agency's failure to consult or comply with their consultation procedures; and
 - e) Providing an opportunity for Governors or their designees to seek judicial review of an agency's failure to consult.
16. Congress and the Executive Branch could make federalism reviews more effective by:
- a) Working with Governors to develop specific criteria and consultation processes for initiating and performing these reviews.
 - b) Providing Governors with an opportunity to comment on federalism assessments before any covered federal action is submitted to OMB for approval.
17. Congress and federal agencies should take the following actions to clarify that *ex parte* policies, FACA, and FOIA are not barriers to consultation:
- a) Federal agencies should (and Congress should require them to) clearly identify and provide rationale for any perceived barriers to consultation;
 - b) Federal agencies should clarify that consultation with state officials does not qualify as *ex parte* communications and that *ex parte* communications are not prohibited at any point during an informal rulemaking process;
 - c) Congress should clarify that meetings held exclusively between federal personnel and state elected officials or their designees acting in their official capacities or in areas of shared responsibilities or administration (and not for the purpose of obtaining collective advice) do not qualify as requiring compliance with FACA procedures; and
 - d) Congress should clarify that FOIA's exemptions apply to federal records shared or exchanged with states (as if those records were shared, exchanged, or created solely within the federal government) and create a statutory exemption to FOIA disclosure for state records in instances where publication of state records provided to federal agencies would violate existing state law.

State Data and Expertise

18. Federal agencies should utilize state data, expertise, and science in the development of federal actions that affect states.
19. Congress and the Executive Branch should, subject to existing state requirements for data protection and transparency, require agencies to incorporate state and local data and expertise into their decisions. This data should include scientific, technical, economic, social, and other information on the issue the agency is trying to address.
20. States merit greater representation on all relevant committees and panels advising federal agencies on scientific, technological, social, and economic issues that inform federal regulatory processes.

Local Agency Decision-Making Authority

21. Regional, state, and local federal agency offices, and their staff, serve as experts in the specific geographic areas in which they serve. These offices are also usually more attuned to the needs of their state partners. However, these offices are not typically entrusted to make strategic decisions on federal policies and programs affecting their areas and impacting the constituents being served. The knowledge of these local federal agency offices should be utilized to ensure federal policies are carried out in a manner that truly benefits the surrounding communities. Western Governors encourage local federal agency offices to continue developing relationships with their state counterparts in order to further promote and improve state-federal coordination. Furthermore, federal agencies should engage in enhanced cooperation with their local agency offices and empower such offices with decision-making authority to ensure federal programs can be deployed in a manner that reflects the nuanced needs of the surrounding communities.

C. GOVERNORS' MANAGEMENT DIRECTIVE

1. The Governors direct WGA staff to work with congressional committees of jurisdiction, the Executive Branch, and other entities, where appropriate, to achieve the objectives of this resolution.
2. Furthermore, the Governors direct WGA staff to consult with the Staff Advisory Council regarding its efforts to realize the objectives of this resolution and to keep the Governors apprised of its progress in this regard.

This resolution will expire in December 2026. Western Governors enact new policy resolutions and amend existing resolutions on a semiannual basis. Please consult westgov.org/resolutions for the most current copy of a resolution and a list of all current WGA policy resolutions.
